About the Knowledge Base

About · https://mobidatalab.eu/knowledge-base/about/

The Knowledge Base of the MobiDataLab EU-funded project provides a web-based tool for searching, querying a large set of resources linked to challenges and emerging principles for data sharing. It serves as a reference on practices and solutions responding to interoperability, the applicable legal frameworks, privacy, licensing, data governance mechanisms in place, standards and technological challenges.

It aims at raising awareness and consolidating knowledge on all aspects of mobility data sharing in Europe. The Knowledge Base results from works conducted within MobiDataLab, but collects inputs from several works beyond this project. It is intended to gather all inputs in one reference place, to become as exhaustive as possible on the existing knowledge about the topic.
